

What's New in Perio?

Update on Peri-implant Diseases, Minimally Invasive Surgery and Corticotomies for Orthodontics
June 19, 2020

Guest Lecturer
Dr. Thomas Wilson

Presented by
The **Dental College of Georgia** Continuing Education
at Augusta University at **West Lake Country Club**

AUGUSTA UNIVERSITY
**DENTAL COLLEGE
OF GEORGIA**

GUEST LECTURER

Thomas G. Wilson Jr., DDS, PA, is a board certified periodontist who has been a private practitioner of periodontics in Dallas since 1974. His practice emphasizes state-of-the-art, minimally invasive nonsurgical and surgical treatment of gum diseases, utilizing advanced visualization and techniques that restore health to previously diseased tissue. Dr. Wilson also focuses on rebuilding lost oral tissue to help patients regain normal function, while ensuring that the teeth and gums look and feel natural. In cases where teeth have been lost, Dr. Wilson works in close collaboration with a restorative dentist to provide dental implants, giving patients the look and function of a natural dentition.

Dr. Wilson has taught his innovative techniques to colleagues around the world. He is the author of numerous professional publications and books on periodontics and implant dentistry. He also is a Clinical Associate Professor at the University of TX Health Science Center at San Antonio Dental School and Baylor University College of Dentistry. He has served as editor-in-chief of an international dental journal, been an Associate Editor for The Journal of Periodontology and is currently Editor in Chief for the journal Decisions in Dentistry.

CO-COURSE DIRECTORS

Christopher Cutler, DDS, PhD, Professor and Chairman of the Department of Periodontics at The Dental College of Georgia at Augusta University.

Mira Ghaly, DMD, Assistant Professor of the Department of Periodontics and Graduate Periodontics Program Director at The Dental College of Georgia at Augusta University.

DESCRIPTION

Advances in the world of periodontics have presented clinicians with new treatments and therapies. This program will focus on new data concerning the etiology and treatment of peri-implant disease including new therapeutic and maintenance modalities. Improvements in visualization during minimally invasive surgery and the role of interdental corticotomies in orthodontic therapy will be covered.

What's New in Perio?

Update on Peri-implant Diseases, Minimally Invasive Surgery and Corticotomies for Orthodontics
June 19, 2020

OBJECTIVES

At the completion of the course, participants should be able to:

- Introduce new concepts about the etiology and therapy for per-implant problems.
- Recognize the role of cement in these processes and how to ameliorate the problem.
- Discuss the details of the possible role of titanium particles in the etiology of these diseases.
- Discuss the new approaches for treating these problems.
- Review how to incorporate minimally invasive periodontal therapy into practice.
- Determine which visualization technologies will be applicable.
- Identify advantages and disadvantages of the dental endoscope and the dental videoscope.
- Review the rationale for corticotomies.
- Recognize which cases respond well to this therapy.
- Identify potential complications and how to avoid them.

COMFORT ZONE

Although every effort is made to have a comfortable temperature in the meeting room, we realize everyone's comfort zone is different. Please bring a jacket or light wrap in case the room is too cool for your comfort.

SPECIAL NEEDS
