Yubikey/U2F Tokens may be an alternative option. These are small devices that you can carry with you, for instance, on your keychain. They plug into your USB port on your computer. Every device is unique, and they are inexpensive and require no subscription service. U2F tokens work very well for web-based sites accessible via Chrome, but they do have some limitations.

[How does a Yubikey Work?](#)

Limitations on U2F Tokens:

- Does not work with Lightweight Directory Access Protocol (LDAP) sites
- Does not work with Virtual Private Network (VPN)
- Will essentially only work for Google Chrome
- For sites which have an in-line Duo prompt on the webpage...
