I would like to work with you. I too am grateful to the GRU staff who have pulled off this amazing course.

A big thank you and acknowledgement to Brenda for the caring she has demonstrated for class participants. I appreciated the bagged lunch she provided on the long bus ride from the Atlanta airport. That was a lifesaver and the homemade cookies went a long way too.

An excellent course that was facilitated by an excellent staff and host institution.

Jan Hobbs-Moore, MLS, MBA
California
Each and every lecture is pushing me to think in different ways and my ideas for using what I have learned are endless.

Thank you to all the presenters and the organizers for making this course available and for getting such knowledgeable and engaging speakers!

“For the newly developing discipline of mapping and sequencing (including analysis of the information) we have adopted the term Genomics. We are indebted to T. H. Roderick of the Jackson Laboratory, Bar Harbor, Maine, for suggesting the term. The new discipline is born from a marriage of molecular and cell biology with classical genetics and is fostered by computational science.” Victor A. McKusick and Frank H. Ruddle. A new discipline, a new name, a new journal (editorial). Genome 1987 Sep;1:1.
Teach a man to fish, you feed him for a lifetime.

(Teach us to pick grapes, & the fermentation process and we will get tipsy.)

Thank you for teaching us to fish!

Education is the most powerful weapon which you can use to change the world.

- Nelson Mandela
I would like to express my sincere appreciation to the National Library of Medicine for the opportunity to participate in this dynamic biomedical informatics course. The information and knowledge gained and resources discovered will assist with the state-wide research and systems support provided by the South Carolina Clinical & Translational Research Institute (SCTR). Thank you to the faculty and staff of Georgia Regents University for being gracious hosts of this event, and to the expert presenters who have helped bring perspective to the complex topic of ‘computers in medicine’.

Brigette White, MA, CCRP

Thank you!  - Fall 2014 Biomedical Informatics Students
Thank you so much for allowing me to participate in this outstanding course; I am grateful to have been given this opportunity. The faculty have been generous of their time and knowledge. It has been thrilling to interact with these powerful minds and share in their thirst for knowledge and passion for discovery.

Thank you for a wonderful week!
