STUDENT ACHIEVEMENTS
Our students are recipients of many national and international awards including:

- Caroline tum Suden/Frances Hellebrandt Professional Opportunity Awards for the 2017 Experimental Biology meeting

American Heart Association (AHA) Predoctoral Fellowship

Microcirculatory Society 2018 Zweifach Student Travel Award

American Physiological Society (APS) Minority Travel Fellowship Award
Augusta University Graduate School Excellence of Research in Physiology Award

Commitment to science and community

Our graduate students, postdoctoral fellows, and faculty give back. We are involved in community outreach such as PhUN week at local schools, local activities for the homeless, and the AHA Heart Walk.

AUGUSTA UNIVERSITY

American Collegiate of Georgia 1829
WHY PHYSIOLOGY?

Physiology: Integrating the Life Sciences from Molecule to Organism

We emphasize an integrative approach to physiology, with expertise in molecular, cellular and organismal research methods.

Research Focus: High impact translational research in cardiovascular and metabolic physiology and pathophysiology.

Faculty: Internationally recognized leaders in cardiovascular, endocrine and neuronal physiology who provide a very collaborative and cohesive environment for all trainees in the program.

Trainee Grants: 10 American Heart Association (AHA) and 2 NIH Predoctoral Fellowships in the last 5 years alone. The most trainee-funded program at Augusta University.

Publications: An average of 3 first author publications by graduation.

Our Graduates: 90% of our graduates move to postdoctoral positions in highly reputable research institutions such as Harvard University, University of Michigan, and UCLA. Our program has trained numerous scientists who lead successful research programs all over the world and we keep on running.

Trainee Grants: 10 American Heart Association (AHA) and 2 NIH Predoctoral Fellowships in the last 5 years alone. The most trainee-funded program at Augusta University.

Publications: An average of 3 first author publications by graduation.

Mahmoud Abdelbary Physiology Graduate Student

"The Physiology Department is the best starting place I could ask for as a graduate student. The faculty are always there for each other and willing to help by all possible means, to hone the skills and advance the research interests of all physiology trainees. The main goal of the physiology program is to nurture a trustworthy and reliable future physiologist, not just produce a degree holder. Trainees learn, not only how to develop a good research project, but also how to survive a highly competitive environment."

Marissa Seamon, Physiology Graduate Student: “I chose physiology because the department is extremely collaborative and friendly. Everyone is willing and eager to help and work with each other.”

Seminar Program: Chance to meet and interact with external speakers leaders in their fields.
